# Network Security

## 1. Configure Azure Bastion to allow secure connectivity from the Azure Portal to the Azure Virtual machines.

Screenshot of the Bastion Overview page should indicate the virtual network/subnet. Placed correctly, only one Bastion will be needed.

The screenshot shows the Azure Bastion Overview page for a resource named 'Microsoft.BastionHost-20220728203550'. The left sidebar contains navigation links for Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Settings, Sessions, Configuration, Properties, Locks, Monitoring, Metrics, and Logs. The main content area is divided into 'Essentials' and 'Sessions' sections. The 'Essentials' section displays the following details:

- Resource group (move): [rg-core](#)
- Location: East US
- Subscription (move): [Udacity\\_1069](#)
- Subscription ID: 0d904d18-8db0-4da9-ac30-cbd31a3a16e5
- Tags (edit): [Click here to add tags](#)
- Virtual network/subnet: [VNet-core/AzureBastionSubnet](#)
- Public DNS name: bst-92d31da4-c227-4968-adf6-10e21a597a17.bastion.azure.com
- Public IP address: [VNet-core-ip](#)
- Provisioning state: Succeeded

The 'Sessions' section shows a table with columns: SessionId, StartTime (UTC), TargetSubscriptionId, ResourceType, TargetHostName, TargetResourceGroup, Username, TargetIpAddress, and Protocol. The table currently contains no results.

The screenshot shows the Azure Virtual Machine Overview page for a resource named 'vm-ws16devapp'. The left sidebar contains navigation links for Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Settings, and Networking. The main content area is divided into 'Essentials' and 'JSON View' sections. The 'Essentials' section displays the following details:

- Resource group (move): [rg-dev](#)
- Status: Running
- Location: East US
- Subscription (move): [Udacity\\_1069](#)
- Subscription ID: 0d904d18-8db0-4da9-ac30-cbd31a3a16e5

## 2. Reduce attack footprint by removing public IP addresses.

The screenshot clearly shows public IP address is blank for each VM

The screenshot displays the Azure portal interface for a virtual machine named "VM-WS16DevWeb". The "Essentials" tab is selected, showing the following details:

- Resource group:** rg-dev
- Status:** Running
- Location:** East US
- Subscription:** Udagity.1069
- Subscription ID:** 0d904d18-8db0-4da9-ac30-cbd31a3a16e5
- Tags:** Click here to add tags
- Operating system:** Windows (Windows Server 2019 Datacenter)
- Size:** Standard B2s (2 vcpus, 4 GiB memory)
- Public IP address:** -
- Virtual network/subnet:** Vnet-Dev/default
- DNS name:** -

The "Networking" section on the right provides further details:

- Public IP address:** -
- Public IP address (IPv6):** -
- Private IP address:** 10.2.0.4
- Private IP address (IPv6):** -
- Virtual network/subnet:** Vnet-Dev/default
- DNS name:** Configure

# Data and Encryption

## 1. Protect data at rest by encrypting data disks using a customer-managed key

Screenshots should show the disk encryption type for each VM.

The screenshot displays the Azure portal interface for managing disk encryption. It is divided into two main sections, each showing the configuration for a specific virtual machine's disk.

**Top Section: des-disk | Resources**

This section shows a list of resources under the 'des-disk' Disk Encryption Set. The table below summarizes the data shown:

Name	Type	Resource Group	Subscription
VM-WS16DEVAPP-OSDISK	Disk	RG-DEV	Udacity 1069
VM-WS19HRL-APP-OSDISK	Disk	RG-HRLEGAL	Udacity 1069
VM-WS19HRL-WEB-OSDISK	Disk	RG-HRLEGAL	Udacity 1069
VM-WS16OPWEB-OSDISK	Disk	RG-OPERATIONS	Udacity 1069
VM-WS19OPAPP-OSDISK	Disk	RG-OPERATIONS	Udacity 1069

**Bottom Section: vm-ws16devapp-osdisk | Encryption**

This section shows the encryption configuration for the 'vm-ws16devapp-osdisk' disk. The configuration is as follows:

- Encryption type:** Encryption at-rest with a customer-managed key
- Disk encryption set:** des-disk

**Bottom Section: VM-WS16DevWeb-osdisk | Encryption**

This section shows the encryption configuration for the 'VM-WS16DevWeb-osdisk' disk. The configuration is as follows:

- Encryption type:** Encryption at-rest with a customer-managed key
- Disk encryption set:** des-disk

Connection PolicyConfigure how clients communicate with your SQL database server. [Learn more](#)

Connection policy☒ Default - Uses Redirect policy for all client connections originating inside of Azure and Proxy for all client connections originating outside Azure☐ Proxy - All connections are proxied via the Azure SQL Database gateways☐ Redirect - Clients establish connections directly to the node hosting the database

Encryption in transitThis server supports encrypted connections using Transport Layer Connections (TLS). Any login attempts from clients using a TLS version less than the Minimum TLS Version shall be rejected. For information on connecting with TLS/SSL [Learn more](#)

Minimum TLS version

TLS 1.2

### 3. Protect SQL data by enabling Azure Defender for SQL.

Screenshot that shows Azure Defender for SQL is enabled.

The image displays two screenshots of the Azure portal interface, specifically the Microsoft Defender for Cloud page for an SQL server resource.

**Top Screenshot (sql-devdata-202442):**

- Header:** sql-devdata-202442 | Microsoft Defender for Cloud
- Left Navigation Panel:** Includes sections for Settings (Azure Active Directory, SQL databases, SQL elastic pools, DTU quota, Properties, Locks), Data management (Backups, Deleted databases, Failover groups, Import/Export history), and Security (Networking, Microsoft Defender for Cloud, Transparent data encryption, Identity, Auditing).
- Main Content Area:**
  - Summary Cards:** Recommendations (0), Security alerts (0), Findings (0), and a status card indicating "Microsoft Defender for SQL: Enabled at the subscription-level (Configure)".
  - Recommendations Section:** States "Defender for Cloud continuously monitors the configuration of your SQL Servers to identify potential security vulnerabilities and recommends actions to mitigate them." It shows "No recommendations to display" with three checkmarks and a button to "View all recommendations in Defender for Cloud".
  - Security incidents and alerts Section:** States "Defender for Cloud uses advanced analytics and global threat intelligence to alert you to malicious activity. Alerts displayed below are from the past 21 days."

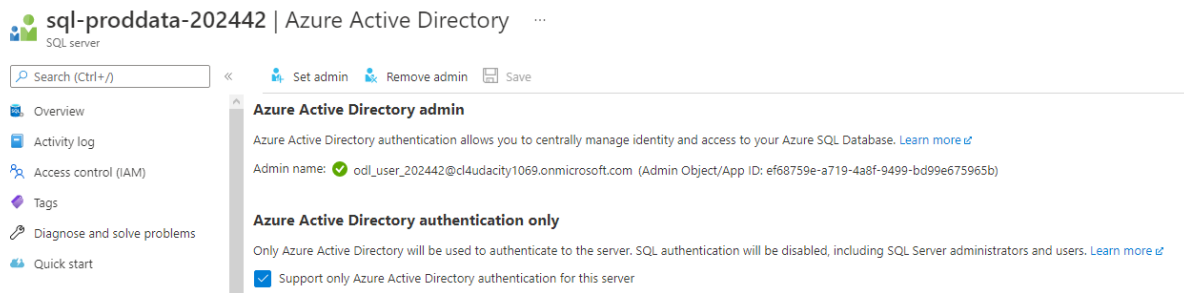

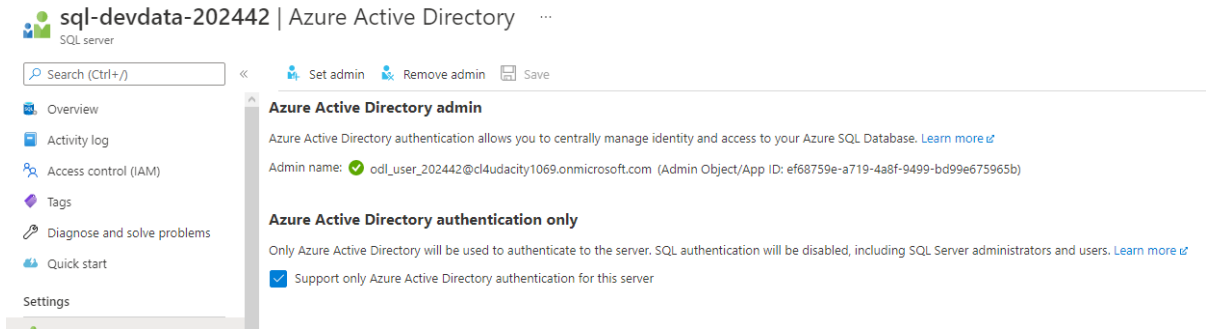

**Bottom Screenshot (sql-proddata-202442):**

- Header:** sql-proddata-202442 | Microsoft Defender for Cloud
- Left Navigation Panel:** Includes sections for Overview (Activity log, Access control (IAM), Tags, Diagnose and solve problems, Quick start), Settings (Azure Active Directory, SQL databases, SQL elastic pools, DTU quota, Properties, Locks), Data management (Backups, Deleted databases, Failover groups, Import/Export history), and Security (Networking, Microsoft Defender for Cloud, Transparent data encryption).
- Main Content Area:**
  - Summary Cards:** Recommendations (0), Security alerts (0), Findings (0), and a status card indicating "Microsoft Defender for SQL: Enabled at the subscription-level".
  - Recommendations Section:** Similar to the top screenshot, showing "No recommendations to display" and a button to "View all recommendations in Defender for Cloud".
  - Security incidents and alerts Section:** Includes a link to "Check for alerts on this resource in Microsoft Defender for Cloud".
  - Vulnerability assessment findings Section:** (Partially visible at the bottom).

#### 4. Secure Azure SQL by enforcing Azure AD authentication over the weaker SQL authentication methods.

Show screenshot of Azure AD authentication for SQL enabled

# Protection

## 1. Protect virtual machines from malware by using available extensions.

Screenshot of the extensions tab for all VM shows anti-malware is enabled

The following screenshots show the 'Extensions' tab for three different virtual machines in the Azure portal, all of which have the 'IaaSAntimalware' extension enabled.

# User accounts requiring MFA

Enable MFA for the following user accounts:

**Ramesh Bamidipati**

1. “Enable MFA” currently has a score of 0/10. So it has the biggest impact on security if we fix it.

MFA is not set up for user account Ramesh Bamidipati.

▼ Apply system updates	6	0.00	■■■■■■■	+ 11%	■ Unassigned	6 of 6 resources	■■■■■■■
Log Analytics agent should be installed on virtual machines					■ Unassigned	6 of 6 virtual machines	■■■■■■■
System updates should be installed on your machines					■ Completed	0 of 6 virtual machines	■■■■■■■
▼ Remediate vulnerabilities	6	0.00	■■■■■■■	+ 11%	■ Unassigned	6 of 6 resources	■■■■■■■
Machines should have a vulnerability assessment solution					■ Unassigned	6 of 6 virtual machines	■■■■■■■
Machines should have vulnerability findings resolved					■ Completed	0 of 5 virtual machines	■■■■■■■

2. The other 2 top remediations are “Apply system updates” and “Remediate vulnerabilities”. Both of them have a score of 0/6.
3. We should install the log analytics agent on all of our VMs.
4. And we should install vulnerability assessment tools on our VMs.

# Monitoring

## 1. Configure Azure Sentinel Connectors.

Provide screenshot of Azure Sentinel Data Connectors Page.

The screenshot shows the Azure Sentinel configuration interface for a resource named 'sql-devdata-202442' under the 'Auditing' section. The left-hand navigation pane lists various categories: Locks, Data management (Backups, Deleted databases, Failover groups, Import/Export history), Security (Networking, Microsoft Defender for Cloud, Transparent data encryption, Identity), Auditing (selected), Intelligent Performance (Automatic tuning, Recommendations), Monitoring (Logs), Automation (Tasks (preview), Export template), and Support + troubleshooting.

The main content area is titled 'Azure SQL Auditing' and includes a description: 'Azure SQL Auditing tracks database events and writes them to an audit log in your Azure Storage account, Log Analytics workspace or Event Hub. [Learn more about Azure SQL Auditing](#)'. Below this, there is a toggle for 'Enable Azure SQL Auditing' which is turned on. Under 'Audit log destination (choose at least one):', 'Storage' is unchecked and 'Log Analytics' is checked. The 'Subscription' dropdown is set to 'Udacity 1069' and the 'Log Analytics' dropdown is set to 'law-udacity(eastus)'. 'Event Hub' is also unchecked.

The next section is 'Auditing of Microsoft support operations', described as: 'Auditing of Microsoft support operations tracks Microsoft support engineers' (DevOps) operations on your server and writes them to an audit log in your Azure Storage account, Log Analytics workspace or Event Hub. [Learn more about Auditing of Microsoft support operations](#)'. At the bottom, there are two toggle switches: 'Enable Auditing of Microsoft support operations' (turned on) and 'Use different audit log destinations' (turned off).

At least Azure Active Directory and Azure Active Directory Identity Protection connectors should be selected

### Azure SQL Auditing

Azure SQL Auditing tracks database events and writes them to an audit log in your Azure Storage account, Log Analytics workspace or Event Hub. [Learn more about Azure SQL Auditing](#)

Enable Azure SQL Auditing  

Audit log destination (choose at least one):

☐ Storage

☒ Log Analytics

Subscription \*  

Udacity 1069

Log Analytics \*  

law-udacity(eastus)

☐ Event Hub

### Auditing of Microsoft support operations

Auditing of Microsoft support operations tracks Microsoft support engineers' (DevOps) operations on your server and writes them to an audit log in your Azure Storage account, Log Analytics workspace or Event Hub. [Learn more about Auditing of Microsoft support operations](#)

Enable Auditing of Microsoft support operations  

Use different audit log destinations  

## 2. Monitor and Protect SQL databases by configuring auditing.

Provide screenshot showing SQL Auditing is enabled with Log Analytics Workspace

The screenshot displays the Microsoft Sentinel 'Data connectors' page. The left sidebar contains navigation links for General (Overview, Logs, News & guides, Search), Threat management (Incidents, Workbooks, Hunting, Notebooks, Entity behavior, Threat intelligence, MITRE ATT&CK), and Content management (Content hub, Repositories, Community). The main area shows a workspace lock message and summary statistics: 123 Connectors and 5 Connected. Below this is a search bar and filter buttons for Providers (All), Data Types (All), and Status (Connected). A table lists the connectors, all of which are in a 'Connected' status.

Status	Connector name ↑
Connected	Azure Active Directory Microsoft
Connected	Azure Active Directory Identity Protection Microsoft
Connected	Azure SQL Databases Microsoft
Connected	Microsoft Defender for Cloud Microsoft
Connected	Security Events via Legacy Agent Microsoft

# Compliance

## 1. Enable monitoring of established industry and regulatory standards

Screenshot proof of added NIST SP 800-53 rev4 policy

Home > Microsoft Defender for Cloud >
